#### Crash protection

Evaluation of a seat's potential for providing an additional margin of safety in simulated 35mph frontal crashes when compared to the performance of similar models. Evaluation is based on injury criteria measured on standardized child-size dummies, head contact with the back of a simulated front seat, and the car seat's ability to remain intact during the course of testing

#### Ease of use

Our Judgment of how easy each seat is to use including the clarity of labels and instructions, adjustments of clips and buckles, the transition of the seat from rear facing to forward facing and installation features such as LATCH connections and top tethers.

#### Rear LATCH

Rear-facing installation using the LATCH system. A rating of how compatible, easy and secure a child car seat can be correctly installed in certain test vehicles. This rating is based on a rear-facing installation using the LATCH system.

#### Rear belt

Rear-facing installation using vehicle seat belts. A rating of how compatible, easy and secure a child car seat can be correctly installed in certain test vehicles. This rating is based on a rear-facing installation using the vehicle belts.

#### Forward LATCH

Forward-facing installation using the LATCH system. A rating of how compatible, easy and secure a child car seat can be correctly installed in certain test vehicles. This rating is based on a forward-facing installation using the LATCH system.

#### Forward belt

Forward-facing installation using vehicle seat belts. A rating of how compatible, easy and secure a child car seat can be correctly installed in certain test vehicles. This rating is based on a forward-facing installation using the vehicle belts.
